

## Computer Networking Services

We offer **networking services for home and business**. Whether you need a simple network for your home to share printers and Internet access or a robust, fault-tolerant and secure setup for your business, Dale Computers can help.

Today's small office / home office networking products are made so that anyone can plug one in and get a simple network up and running. Along with this ease of use comes a large gap in information security, particularly with wireless networking products, but for the average home user this does not pose a problem.

Making sure no one can access your data or use your shared Internet service without your knowledge or consent is your own responsibility. If someone uses your Internet services to perform illegal activities you may be held accountable.

### **Networking Setup & Support Services** (partial list)

<ul style="list-style-type: none"><li>• Hubs &amp; Switches</li><li>• Router Configuration</li><li>• Network Cabling</li><li>• Wall Jacks / Paneling</li></ul>	<ul style="list-style-type: none"><li>• Network Security Testing</li><li>• Firewalls</li><li>• Intrusion Detection Systems (IDS)</li><li>• Virtual Private Networking (VPN)</li></ul>
